SnapStore Customer Account Security, Authentication, and Privacy Protocols

Document ID: POL-SS-SEC-2026-V1 | Information Security & User Trust Division

1. Account Authentication and Credential Requirements

SnapStore prioritizes user identity security, data privacy, and fraud prevention across all touchpoints.

Password Complexity Standards

- Passwords must be at least 12 characters long and include an uppercase letter, lowercase letter, number, and special symbol.
- Passwords cannot match account email addresses or contain easily guessable sequences.

Two-Factor Authentication (2FA)

- 2FA is mandatory for accounts storing payment profiles or placing single orders exceeding $500.00 USD.
- Supported 2FA methods include TOTP authenticator apps (Google Authenticator, Authy, Microsoft Authenticator) and SMS verification.

2. Suspicious Activity, Account Freezes, and Recovery

Automated Threat Detection

- Our fraud detection engine locks accounts upon detecting abnormal IP addresses, credential stuffing, or simultaneous multi-location orders.

Identity Verification and Unlocking Protocol

- To recover a frozen account, users must verify identity through secondary recovery channels and upload government-issued photo ID.
- Account recovery reviews are completed by the Fraud Prevention Team within 12 to 24 business hours.

Unauthorized Order Cancellation

- If suspicious orders are detected, customers must report them within 2 hours to trigger courier package recall and payment reversal.

3. Customer Data Privacy Rights (GDPR & CCPA Compliance)

Right to Data Access and Portability

- Customers can request a complete export of their account history, addresses, and order logs via the Privacy Center.
- Data packages are compiled and delivered securely within 30 calendar days of verification.

Right to Erasure (Account Deletion)

- Account deletion permanently scrubs personal profiles, address books, and payment tokens.
- Financial transaction records required for statutory tax audits are archived in pseudonymized format for 7 years as legally mandated.

4. Phishing Alerts and Customer Security Guidelines

Legitimate Communication Channels

- All official customer communications originate exclusively from @snapstore.com or @support.snapstore.com domains.

Zero-Trust Customer Protocol

• SnapStore support representatives will NEVER request customer passwords, 2FA codes, or full 16-digit payment card numbers.
• Forward all phishing emails and fraudulent SMS messages immediately to security@snapstore.com.
